

ARMCHAIR VIP

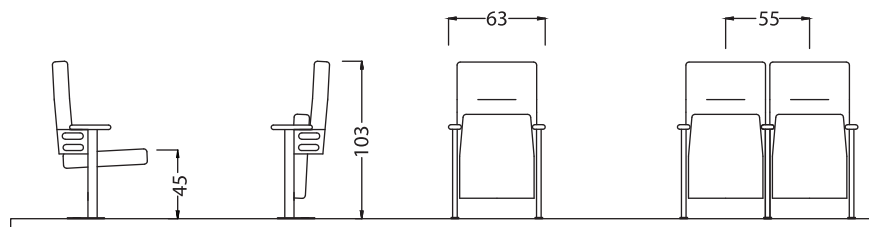

EPS V8

DESIGNATION

sports and auditorium facilities

The EPS V8 armchair is a product designed for VIP zones in sports and auditorium facilities. It is made using high-class materials and sewn with full attention to detail. The design of the armchair allows for individual assembly or a space-saving version with common armrests, at axial spacings of 50 to 65 cm. There is a possibility of mounting to the horizontal and vertical plane of the auditorium step.

The steel structure of the chair is protected against corrosion in the process of hot-dip galvanizing or galvanizing with powder paint coating for an even better visual effect. Additional elements of the equipment are numbered seats and rows, as well as covers ensuring long-term durability and aesthetics.
